BELSTAFF PURE MOTORCYCLE 2013

BELSTAFF 2013
PURE MOTORCYCLE : MATERIALS

SYNTHETICS

CORDURA 1000 - TWILL

Cordura 1000 is a high-tenacity twill fabric, exceptionally resistant to traction (a 5 cm strip > 180kg) and tearing (> 50 kg). The fabric, produced by DuPont, is bonded with a water-proof and breathable membrane, ensuring a high degree of protection and comfort. All styles in this fabric are seam-sealed.

Black

REPLICA NYLON

Belflex Replica Nylon has been produced by DuPont exclusively for Belstaff since the 1960's. Styles made in this nylon are seam-sealed or offered with a seam-sealed Miporex® membrane, so that they are completely waterproof.

BELSTAFF 2013 PURE MOTORCYCLE : MATERIALS

NATURALS

LEATHER

Leather is known worldwide to offer the highest degree of protection to motorcyclists. A wide choice of leather is available in the Pure Motorcycle 2013 collection:

- Bull Grain Leather: Naturally tanned; drum dyed bull leather with a thickness between 1.0 and 1.1 mm. Extremely abrasion resistant and comfortable.
- Natural Cavallo: Naturally tanned, drum dyed horse leather with a thickness between 0.9 and 1.1 mm. The top of the range in terms of elegance, resistance and softness.
- Ageing-treated Cavallo: vacuum garment dyed horse leather with a thickness of 0.8 mm.

WAX COTTON

Belstaff's signature 100% cotton is soaked and coated with wax to make it waterproof, without compromising the naturally comfortable and durable characteristics of the material. Wax cotton is a traditional maritime fabric, originally used for ships' sails and dockers' rainwear. Universally regarded as a material resistant to poor weather conditions, it became a popular staple in waterproof sportswear in the 1930's. Belstaff was one of the first companies to work with Wax Cotton.

BELSTAFF 2013 PURE MOTORCYCLE : PROTECTORS

D30™ - PROTECTORS

Starting from the new PM 2013 collection, all styles will be provided with the "intelligent" soft protectors by D30 Lab.

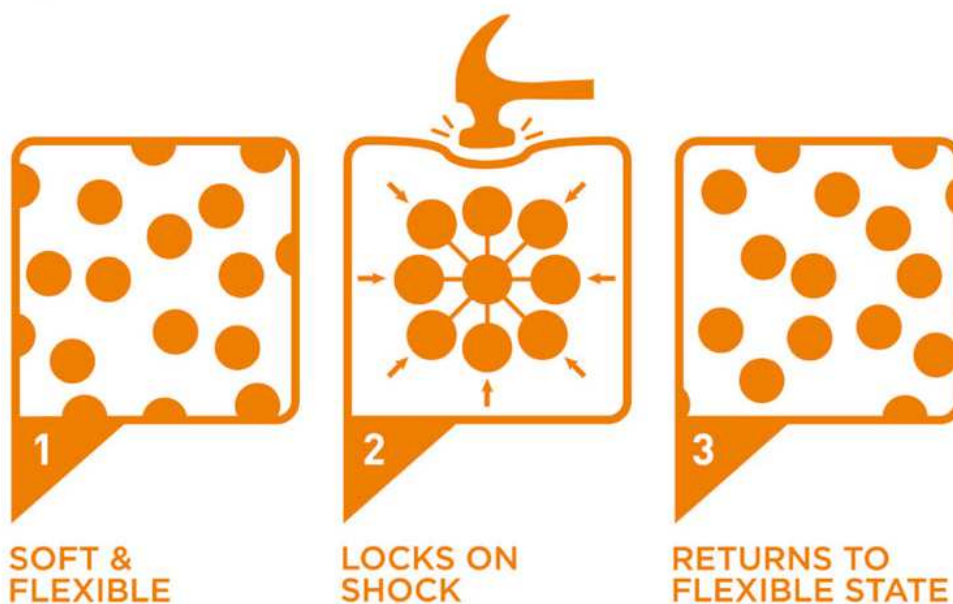

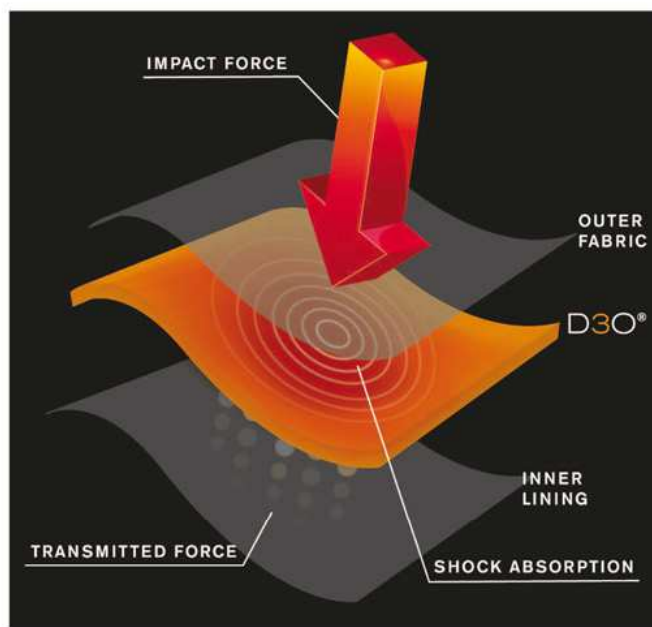

D30™ is a patented protective material that combines enhanced chemistry with product engineering to produce high performance shock absorption and impact protection solutions.

The molecular structure of the composite material allows protectors to be soft and malleable under normal conditions, but when shocked by sudden force, the molecules lock up to absorb the impact energy and then instantly return to their flexible state to spread the force.

This characteristic makes the protectors flexible, comfortable, yet offering total protection.

D30™ components integrate perfectly into garments, so that neither the style nor the function are compromised. Their light weight is such that their presence inside the garment is almost unperceived.

The range offered includes T5 EVO for limb and Viper 1 and 2 for back protection.

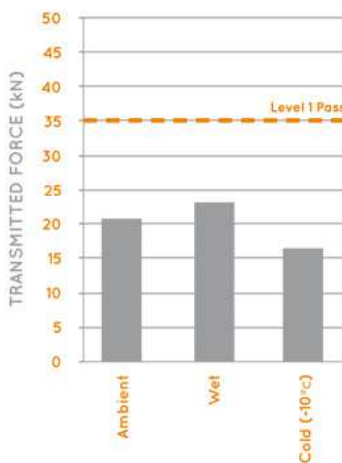

T5 EVO ^{CE} LIMB PROTECTORS

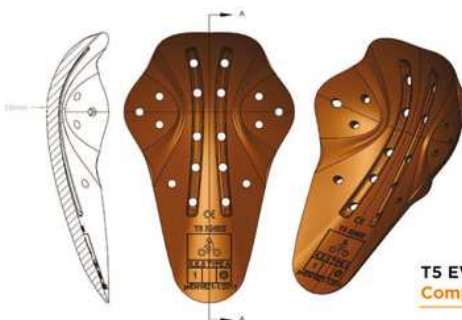

The T5 EVO XT limb components range offers good protection, whilst being extremely comfortable and lightweight and performing well in extreme temperatures. The components are CE certified and ideal for sports, particularly snowsports and the motorcycle markets.

- CE certified prEN1621-1:2011
- Level 1 in ambient, wet and cold conditions
- Area A coverage
- Temperature stable
- Thickness 10mm
- Non-toxic
